Our Pre-treatment Process

Our pre-treatment process is designed to deliver the highest quality powder coating finish to your materials.

Our Process Sequence

We follow a strict process sequence to ensure that our powder coating is applied to the highest possible standard.

Quality Standards

POWDER

Salt Spray: Minimum 1000 hours BS3900F4
Specific Gravity: Varies - According to colour and type
Impact Resistance: Excellent pass 100 inch pounds BS3900E3
Scratch Resistance: BS3900E2 Normally 4kg load pass.
Humidity: Minimum 1000 hours BS3900F2

COATINGS

Unless otherwise specified all of our galvanised steel output complies with BS EN 13438 (previously BS 6497) and Aluminium to BS 6496. The minimum average coating required is 60 microns. It is our practice to target and achieve an average coating thickness of 80 microns.

Our Quality Control System is registered in accordance with BS EN ISO 9001:2000.

WARRANTIES

Under normal circumstances warranties of up to ten years or more are available subject to the following conditions which can be found on our website.
